

BETTERTEST

CI that doesn't suck. One mark, one gradient, one type family. Sharp edges, exact numbers, no decoration that doesn't earn its place.

01 LOGO

02 CONSTRUCTION

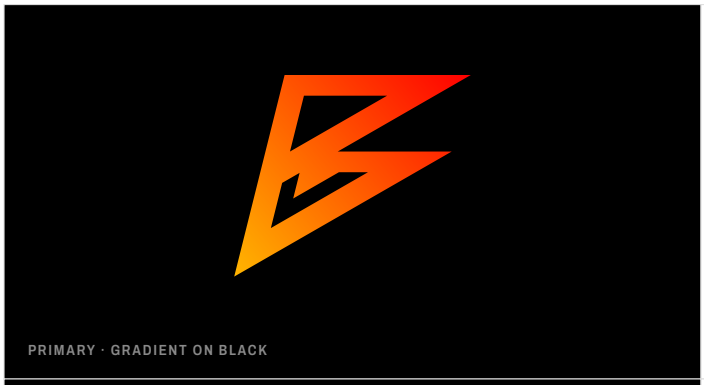

03 COLOR

04 TYPE

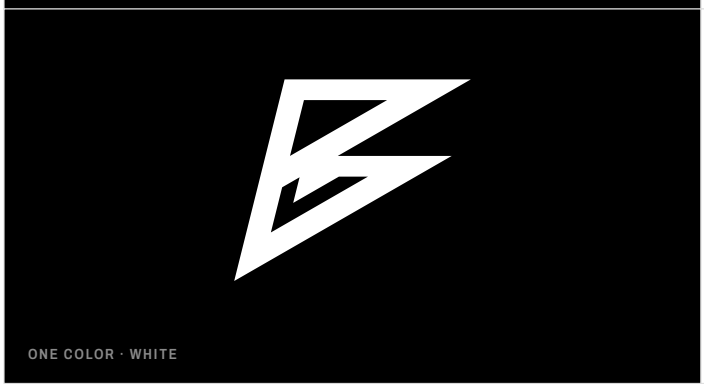

05 IN USE

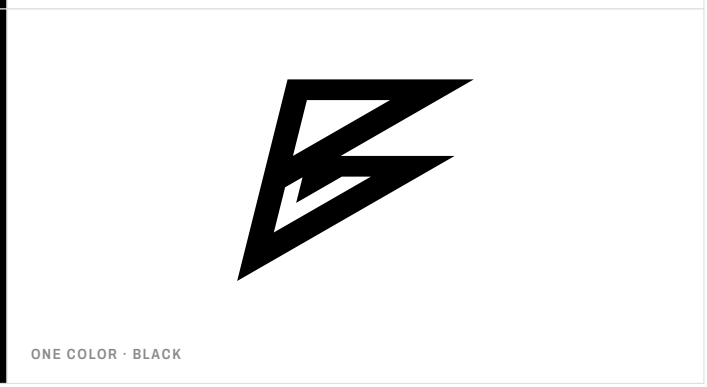

THE B

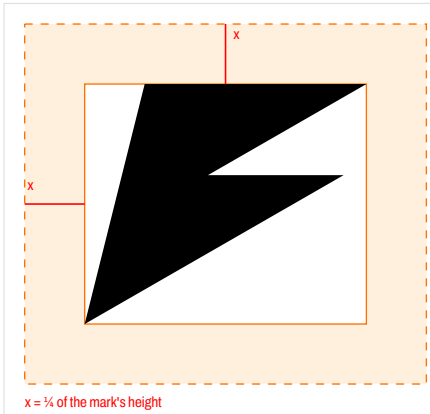

A forward-leaning B made of two blades. The top counter is a play button, the bottom counter is a check: run, then pass. There is no wordmark lockup yet. When the name is needed, set it in the hero style next to the mark.

PRIMARY · GRADIENT ON BLACK

GRADIENT ON WHITE · ANY SIZE

ONE COLOR · WHITE

ONE COLOR · BLACK

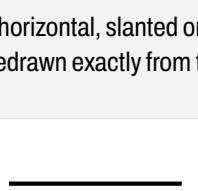

x = ¼ of the mark's height

Clear space	x = ¼ of the mark's height on every side, measured from its bounding box.
Next to type	At least x from the box. Set the name in the hero style, cap height no taller than the mark.
In a container	The mark fills at most 60% of the container's shorter side.
Minimum size	24px tall on screen, 6mm in print. Favicon handling is still open.
Never	Stretch, rotate, re-slant, outline, add shadows or glows, add gradient stops, or put the gradient on a photo.

THREE DIRECTIONS, TWO STROKES

Every edge is horizontal, slanted or diagonal. Every vertex is fixed by those directions and the stroke widths, so the mark can be redrawn exactly from this page. Units: y down, origin at the bottom point's x and the top edge.

H · 0°

Top and middle bars, their inner edges, the top of the play, and the cut at the check's tip.

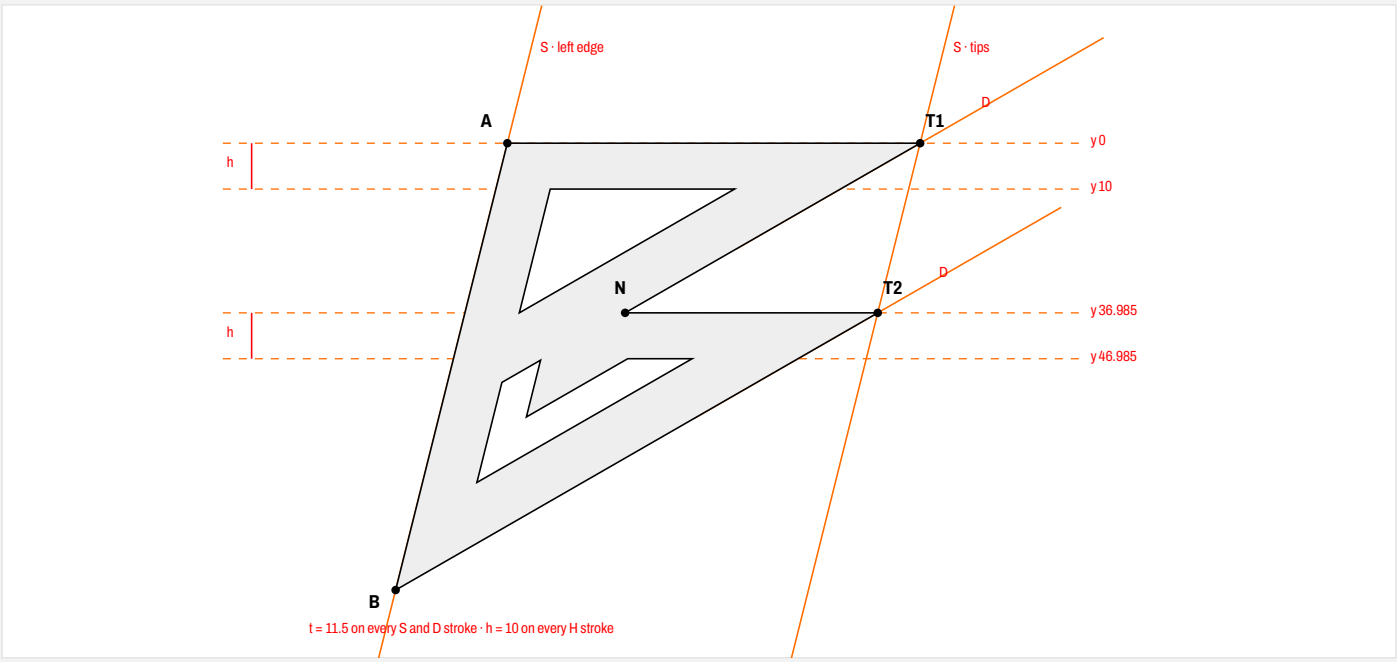

S · 14.036° FROM VERTICAL

Run 1 : rise 4. The left edge, the line through both tips, the play's left edge, and both edges of the check's short arm.

D · 29.899° FROM HORIZONTAL

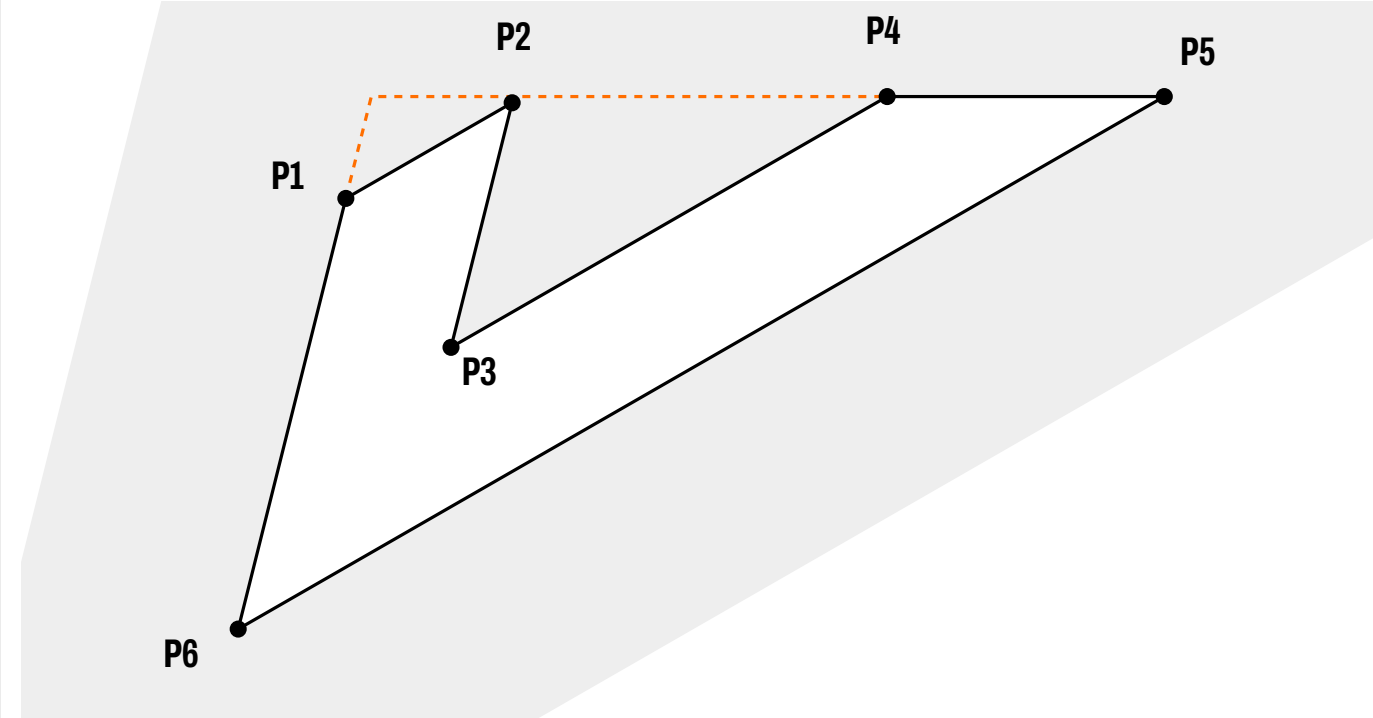

Rise 23 : run 40. Both outer diagonals, the play's hypotenuse, the check's long arm, and the top cut of its short arm.

Bounding box	114.356 × 97.423
Top bar	90 long, from A to T1
Stroke t	11.5 on every slanted and diagonal stroke, measured perpendicular
Stroke h	10 on every horizontal bar, optically trimmed to 0.87t
Tips	T1 and T2 sit on one S line, parallel to the left edge
Middle bar	Top edge at y 36.985, touching the play's bottom vertex. Runs from N to T2
Play counter	Inset h from the top bar, t from the left edge and the diagonal: (33.71, 10), (73.894, 10), (26.963, 36.985)
Outline	A (24.356, 0) → T1 (114.356, 0) → N (50.034, 36.985) → T2 (105.109, 36.985) → B (0, 97.423). Even-odd fill

THE CHECK

Six points, all fixed by the B's own edges. The dashed triangle is the bottom counter, inset exactly like the play button.

P6 → P1	S line, inset t from the left edge. Collinear with the play's left edge
P6 → P5	D line, inset t from the lower diagonal
P5	Tip, where P6–P5 meets the middle bar's inner edge (y 46.985). P4–P5 lies on that edge
Stroke c	7 on both arms: P2–P3 is an S line c from P6–P1, P3–P4 a D line c from P6–P5
P1 → P2	D line, 27.7 from the lower diagonal's outer edge. This sets the short arm's length
Proportion	Short arm 22.5, long arm 54.1, about 1 : 2.4
Points	P1 (23.173, 52.146) P2 (31.6, 47.3) P3 (28.502, 59.694) P4 (50.605, 46.985) P5 (64.648, 46.985) P6 (17.717, 73.97)

BLACK GROUND, HOT ACCENTS

Mostly black and white. Red and orange do the shouting, amber only lives in the logo gradient, and yellow is a rare spark. Pass green and fail red are functional colors that belong to the product, not the brand.

BLACK
#000000

The primary ground: site, UI and decks.

WHITE
#FFFFFF

Type on black, and the secondary ground.

RED
#FF0000

Primary accent: CTAs, key words, the gradient start.

ORANGE
#FF6E00

Secondary accent: eyebrows, highlights, syntax keywords.

AMBER
#FFB700

The gradient end. Also code strings and small highlights on black.

YELLOW
#FFFF00

Rare spark: one element per view at most, on black only.

The brand gradient: linear, two stops, #FF0000 to #FFB700, never with a middle stop. On the logo it runs in the mark's own coordinates from the top-right tip T1 (114.356, 0) to the bottom point B (0, 97.423). It's for the mark and rare hero moments, never for body text or UI fills.

White / Black	Any size.	21 : 1
Red / Black	Any size.	5.3 : 1
Orange / Black	Any size.	7.3 : 1
Amber / Black	Any size.	12 : 1
Red / White	24px and up only. For smaller red text on white use #D40000.	4.0 : 1
Orange / White	Fills and graphics only, never text.	2.9 : 1

ARCHIVO FOR WORDS, MARTIAN MONO FOR CODE

One variable family carries everything from hero to grid labels by moving along its width axis. Archivo by Omnibus-Type and Martian Mono by Evil Martians are both SIL OFL 1.1: free to use, embed and ship.

HERO

ARCHIVO · WIDTH 62 · WEIGHT 700

GO BIG OR GO DIE

All caps, line height 0.88–0.95, tracking 0. For headlines and section titles from 32px up.

COPY

ARCHIVO · WIDTH 80 · WEIGHT 400

Shared and pre-warmed containers shift as much processing as possible out of the hot path. Seconds are the difference between "we'll get back to you" and "it's deployed". Murphy's law says that if something can go wrong, it will. Cover everything so nothing can go wrong.

Sentence case, 15–18px on screen (10–12pt in print), line height 1.5–1.55, measure 60–75 characters. Bold is weight 600.

THE WIDTH AXIS

w 62	ArtifactsFromAnyRun.from_later_task · install_packages	Hero, grid labels, tight UI
w 70	ArtifactsFromAnyRun.from_later_task · install_packages	Tags, table headers
w 80	ArtifactsFromAnyRun.from_later_task · install_packages	Copy, the default
w 90	ArtifactsFromAnyRun.from_later_task · install_packages	Long-form reading, optional
w 100	ArtifactsFromAnyRun.from_later_task · install_packages	The ceiling

Copy sits at 80. Labels, grid headers and tags may go down to 62 when space is tight: narrow them, never shrink them below 11px. Above 100 is off-brand.

TYPE SCALE

Display	GO BIG	96 / 0.88 · w62 · 700 · caps
Headline	KEEP YOUR SECRETS	56 / 0.95 · w62 · 700 · caps

TOKENS

Load both families as variable fonts. Self-host for the airgapped UI; the OFL allows bundling them in the binary if the license file travels with them.

```
:root {
  --bt-black: #000000;  --bt-white: #ffffff;
  --bt-red: #ff0000;    --bt-red-text-on-white: #d40000;
  --bt-orange: #ff6e00; --bt-amber: #ffb700;  --bt-yellow: #ffff00;
  --bt-gradient: linear-gradient(#ff0000, #ffb700);
  --bt-font: "Archivo", sans-serif;
  --bt-mono: "Martian Mono", monospace;
}
.bt-hero  { font: 700 96px/.88 var(--bt-font); font-stretch: 62%; text-transform: uppercase; }
.bt-copy  { font: 400 17px/1.55 var(--bt-font); font-stretch: 80%; }
.bt-label { font: 500 12px/1.2 var(--bt-font); font-stretch: 62%; }  /* 62-75 */
.bt-code  { font: 400 13px/1.6 var(--bt-mono); font-stretch: 75%; }
```

PUT TOGETHER

LEAVE YOUR PROBLEMS IN THE DUST

"IT'S DEPLOYED"

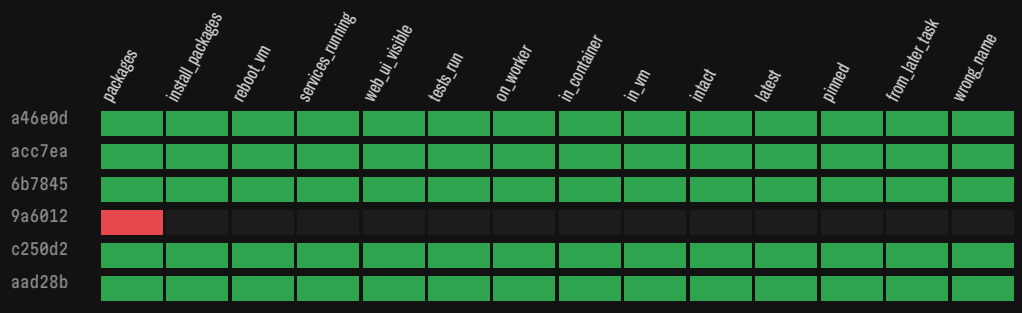

Shared and pre-warmed containers shift as much processing as possible out of the hot path.
Seconds are the difference between "we'll get back to you" and "it's deployed".

Get the binary Read the docs

```python
from bettertest import Stage, run, task

class Test(Stage):
   # Each task gets its own container.
   @task(WORKER, IMAGE)
   def unit():
      run("cd /src && cargo test")
```

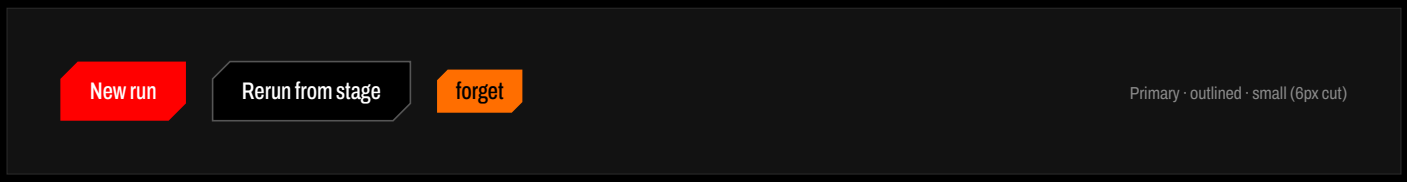

RUN GRID · LABELS AT W62 · SQUARE CORNERS

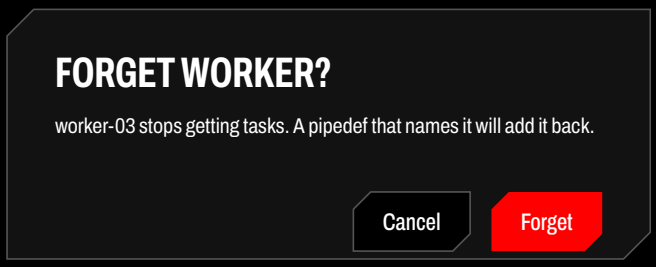

05 · IN USE

CUT CORNERS

Buttons, pop-up windows and other strong rectangles cut their top-left and bottom-right corners at exactly 45°. The other two corners stay square. The cut is 10px on buttons 32–48px tall, 6px below that, and 16px on windows. Outlined shapes carry their 1px border around the cut. Windows whose content runs edge to edge, such as logs, terminals and the run grid, keep square corners so nothing gets clipped.

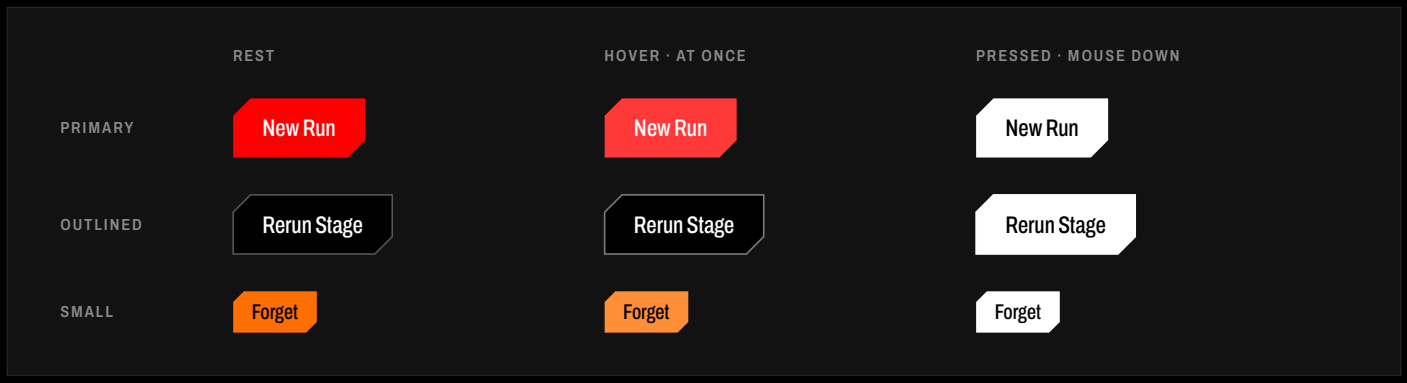

```
.bt-cut {               /* top-left + bottom-right, 45° */
  --cut: 10px;           /* 6px small, 16px windows */
  clip-path: polygon(var(--cut) 0, 100% 0,
    100% calc(100% - var(--cut)), calc(100% - var(--cut)) 100%,
    0 100%, 0 var(--cut));
}
/* outlined: border color on the outer box, fill on the inner one,
   inner --cut = outer - 0.586px, so the cut edge is exactly 1px thick */
```

05 · IN USE

HOVER, PRESS, RELEASE

A button answers the hand. Hovered, it lights up at once: its fill mixes in 22% white. Pressed, it turns white with black type the moment the mouse goes down, not when it comes up. Released, it fades back over 420 ms, easing out, to however it looks now: lit while the pointer is still on it.

RELEASED · 420 MS · EASE-OUT, BACK TO HOVER

0 ms · 70 ms · 140 ms · 210 ms · 280 ms · 350 ms · 420 ms

Hover	Fill mixes in 22% white, at once. Brightness cannot lift pure red, so it is a mix. Outlined buttons light their border.
Pressed	White fill, black type, on mouse down. Outlined buttons turn white through and through.
Released	Fades back over 420 ms, ease-out, wherever the pointer comes up, even after dragging off. Only a release fades: a hover never does.

```
button:hover    { background: color-mix(in srgb, var(--fill), #fff 22%); }  /* at once */
button:active   { background: #fff; color: #000; }                          /* mouse down */
button.released { animation: released 420ms ease-out; }                     /* set on release */
@keyframes released { from { background: #fff; color: #000; } }
```
